Objective: To gain practical experience and enhance my technical and soft skills by contributing to a dynamic organization or internship program, aligning with my academic learning and career aspirations

Education:

B.Tech in Information Technology, Majors in Artificial Intelligence and Machine Learning | Sanjivani College of Engineering, Kopargaon, India | CGPA 9.3/10 (2024–Present)

Diploma in Computer Technology, Sanjivani K.B.P Polytechnic, Kopargaon | Grade: 90.17%

Projects:

Multimodal Human Action and Interaction Recognition using ST-GCN: A deep learning-based system to recognize and analyze human actions and interactions by integrating multiple modalities such as pose, gesture, and facial cues.

- Extracted 2D and 3D skeleton keypoints using YOLOv7-Pose and MediaPipe for spatio-temporal modeling.
- Implemented ST-GCN and LSTM architectures for accurate activity classification and behavior analysis.
- Enhanced recognition performance for healthcare and surveillance applications, including elderly fall detection.

Tech Stack: Python, PyTorch, OpenCV, MediaPipe, YOLOv7-Pose, ST-GCN, NumPy, Matplotlib

Throat Cancer Detection using Voice and Deep Learning: A non-invasive health AI project designed for early detection of throat cancer through detailed analysis of human voice signals.

- Collected and preprocessed patient voice samples to extract MFCC, chroma, and spectral features for accurate audio pattern recognition.
- Designed and trained CNN and LSTM hybrid models to classify healthy versus cancer-affected voices with improved precision.
- Performed hyperparameter tuning and cross-validation to enhance model reliability and reduce false predictions.
- Demonstrated potential for early medical screening and remote telemedicine applications through voice-based diagnostics.

Tech Stack: Python, Librosa, TensorFlow/Keras, NumPy, Matplotlib, Scikit-learn

DeepFake Detection using CNN and Vision Transformers: An AI-powered system designed to detect manipulated or forged videos by analyzing spatial and temporal inconsistencies in facial regions.

- Utilized CNN-based feature extraction and Vision Transformer (ViT) architecture for accurate forgery classification.
- Conducted extensive preprocessing and data augmentation on large-scale deepfake datasets to improve model generalization.
- Integrated frame-level and sequence-level analysis to enhance detection reliability across diverse lighting and motion conditions.
- Contributed to strengthening digital media authenticity and online security verification.

Tech Stack: Python, TensorFlow/Keras, PyTorch, OpenCV, NumPy, Matplotlib

Internship :

BeyondDegree Consultancy Pvt. Ltd, Pune

June 2024 – July 2024

Completed a structured internship on Machine Learning with Python, where I worked on analyzing real-world datasets, performed data preprocessing and visualization, and implemented supervised learning models such as Linear Regression and Random Forest using NumPy, Pandas, and Scikit-learn.

Techking Solution India

April 2022 – June 2022

Completed an internship focused on front-end web development, where I learned the fundamentals of Python, HTML, and CSS, and contributed to developing responsive and user-friendly web interfaces to enhance overall UI/UX design.

Technical Skills & Soft Skills :

Technical Skills:

Programming Languages : Python, C++, Java, HTML, CSS

Frameworks & Libraries: OpenCV, TensorFlow, Keras, PyTorch, MediaPipe, Scikit-learn, Flask, Transformer (BERT), LangChain

Machine Learning & AI: Deep Learning, Computer Vision, Natural Language Processing (NLP), Multimodal Learning, TinyML, Generative AI (GenAI), Model Training & Evaluation, Data Preprocessing

Database Management: MySQL, MongoDB

Soft Skills: Analytical thinking, Adaptability, Team Collaboration, Research Mindset, Growth Orientation

Certifications:

- Machine Learning using Python, SimpliLearn
- Python for Data Science, Infosys Springboard
- Introduction to Natural Language Processing, Infosys Springboard
- Google Cloud Career Launchpad Generative AI Leader track, Google Cloud
